

“Les métiers sous le prisme des ODD”

The link: <https://www.efdd-asbl.org/outil-n5-metiers-odd>

SHORT DESCRIPTION

It helps trainers understand how a profession can impact the sustainable development process and how each person can take a stance/take action. The tool is flexible: you can either select specific elements or use it in its entirety.

SUGGESTIONS

This tool could assist trainers in their teaching about the importance of sustainable work practices. As part of a progressive approach, students reflect together on their perceptions, become familiar with the 17 Sustainable Development Goals (SDGs), and then analyze a chosen professional practice through the lens of these SDGs.

NB: This tool is part of a series of six educational SDG tools developed with the support of Wallonia. The other themes covered are: food, textile fibers, resilience, and forests. A brochure is also available to help you organize a sustainable event (either within your institution or externally).
